

Sustainability: Survey Highlights

Based on 122 Alumni Voices

Sustainability (Berea's definition): The capacity of individuals, communities, and societies to coexist in a manner that maintains *social justice, environmental integrity, and economic well-being* today and for future generations.

Percentage that rated clear agreement (4 or 5 on a 5-point scale) with environmental/sustainability issues

Learning Experiences while at Berea..

Academic Courses

In Issues and Values (1974), we had readings and discussions about fossil fuels, population explosion, migration, and climate issues. I learned I could make a difference.

Campus Programming

Recycling, always accessible and instilled a practice I am committed to.

Labor Positions

Experiences with the college farm - seeing how food is grown and having a chance to be part of that.

Campus Life - Mountain Day

Having the opportunity to get out and enjoy the mountain and outdoors.

and After Berea

As Executive Director of the Boys and Girls Clubs of America program, I became aware of the plight of our inner city poor.... Changes in weather patterns, agriculture reform needs, education and health - that disproportionately affect poor countries and communities which complicate climate change policies. I've worked with the coal mine industry, and now I work in the renewable energy industry. There is no clear line of which is right and wrong. It's easy to focus on just the good, or the bad parts of an industry; but it needs to be looked at as a whole. No news agencies talk about the hazardous environmental waste created from the production and disposal of electric car batteries or the waste from solar panels.

Suggested Allocation for the College's Sustainability Budget Increasing agricultural infrastructure to produce more local food

Other

Creating more academic opportunities (curriculum) for students

Purchasing sustainable energy technologies (solar, geothermal, etc.)
